FLOP-TO-PHOENIX PRODUCT CHALLENGE ON APPLE LISA

WEEKLY PROJECT - 2

Introduction

- The Apple Lisa was a personal computer developed by Apple in the early 1980s. It was Apple’s first computer to feature a graphical user interface (GUI), inspired by work done at Xerox PARC.
- Lisa stand for “Local Integrated Software Architecture”, though it's also rumored to be named after Steve Jobs’ daughter, Lisa Nicole Brennan.

What Job the product was meant to do ?

- To help business professionals complete office tasks more efficiently using a user friendly, graphical computer system without needing technical skills.
- It was primarily designed to write Professional Report, Build Financial Forecast, Draw Business Charts and Manage file Visually with out remembering command line syntax.

Who the Real Persona was(or Should've been)?

The Ideal or Real Persona for Apple Lisa Should've been as structured below:

Rational Richard

Bio: "A traditional business manager seeking modern tools to boost productivity without relying on IT".

Goals and Motivations:

- Improve productivity without needing IT help.
- Present himself as forward thinking and tech aware.
- Stay competitive in a changing business landscape.
- Support team efficiency with better tools.

Pains and Frustations:

- Typewriters waste time and paper with every edit.
- No easy way to visualize or share performance data.
- Fear of looking outdated by younger colleagues.
- Reluctance to recommend costly tech.

Quote:
"I just want a machine that lets me write, calculate, and print reports without needing to call the IT guy every time".

What Assumptions the Creators Made?

- Revolutionize the business office like typewriters and calculators once did.
- Appeal to forward thinking executives.
- so intuitive that training would be minimal.
- Justify a premium price through innovation and status.

Where it Failed in the Customer Journey?

Below is the Customer Journey Map That gives gist which Better illustrates product Failure.

Awareness: Users was Confused where they didn’t find a solution to their actual problem.

Consideration: Too High Price, not aligned to user needs.

Onboarding: Very Low Conversion Rate because of niche user desirability.

Retention: No stickiness due to lack of delivering value.

Loyalty: No Evangelism due to users frustration.

How User Research could’ve saved it?

- Identifying Real problems that helps to prioritize user led design.
- Designing for actual user personas.
- Testing Concepts early with prototypes.
- Understanding price sensititvity and perceived value.
- Continuous feed back loops could help to reach right user at right time with right value proposition.

Redesign or Pivoting Product in to a Successful Offer

The core vision for redesigning the product in to a successful offer should be better attributed with the following key highlightes stated below:

- Local first productivity system, cloud optional.
- Smart but simpe.
- Zero Distraction.
- Clarity Over Customization.

Jobs to be done(JTBD) statement:

The Jobs to be done(JTBD) statement would be as below:

“When I’m managing complex business tasks, I want an intuitive, integrated computing experience, so I can organize work efficiently without relying on IT support”.

User Persona:

The Actual User persona is as follows:

Confident Clara

Bio: “An Operations Leader who values clarity, efficiency and self reliance in tech tools”.

Goals:

Streamline team processes, reduce errors, stay independent from IT bottlenecks.

Motivations:

Wants a system that helps visualize data and eliminates repetitive tasks.

Pains:

Hates switching between incompatible tools, Long IT tickets and cryptic interfaces.

Quote:

“I don’t need more features, I need less Frustation”.

Customer Journey Map	Awareness	Consideration	Onboarding	Retention	Loyalty
Customer actions	Watches key notes, read reviews	Sign up for demo or trial	Setup device, explore features	Check analytics, explore new features,renew plan	Write reviews, refer others
Touch points	Ads, Apple events, Peer referrals	Free trials, webinars, product walk through	Guided setup, Lisa AI, Tutorial	Usage stats. Monthly email reviews	Referral programs, social proof channels(App store reviews)
Experience	Curious	Skeptical, analytical	Eager, slightly nervous	Reassured, confident	Loyal,enthusiastic
Pain points	Might stll feel skeptical if message is too broad or abstract	Mismatch	Overwhelmed	Gets bored if feature stops being useful or if it feels repetitive	Unheard
Opportunities	Position ‘Lisa’ as a thinking tool, not just pc	Provide real world case studies	Personalized Onboarding flow	Show time saved, suggest new ways	Reward Champions,feature power users

What would be the better method to test this hypothesis – Qualitative or Quantitative method?

Ans: The answer is Qualitative method.

As the proposed concept of redesigning the product for a successful offer is in prototype stage where there is a need to validate insights, It’s best suitable to go with Qualitative analysis as it requires to go in deep. Once the hypothesis is narrowed down and tested qualitatively, we can go ahead with quantitative method.
