PRODUCT LENS: WHAT MATTERS MOST - INSTAGRAM

1) Problem-Solution Fit:

Statement:

"When I use instagram to view the content that I care for, I need personal and safe feed but I struggle with unwanted and privacy risk content leading to discomfort and disengagement".

Justification:

Instagram is being criticized for its recent update like instagram map and repost which makes users (young and teenage group) embarrassed and feels like it's borrowing and copying features from the competitors like 'TikTok' and 'X', where there's a need to identify this real problem to deliver the value.

2) Opportunity Sizing:

It is an approach that shifts to think from is there any problem worth solving to what's the potential or impact in solving proposed solution.

In order the size the opportunity to know its impact, Bottom up approach is chosen.

Assumption:

- Instagram has a total of 500 million users around the Globe.
- Youth and teenage groups contribute to 50% of the total users i.e., 250 million
- Penetration Goal is 50% of those 250 million in 3 years i.e., 125 million

Average Revenue per user (ARPU) per month (10$)= $10*125M*12(months) i.e., $15 Billion Average Recurring Revenue(ARR) per year.

Solution prioritization

3) Prioritize using RICE Framework:

It is an solution prioritization model or framework where it's used for mature product having large data available with maximum number of stake holders used to validate and prioritize solution. The acronym **RICE** could be better under as :

R: Reach

I: Impact

C: Confidence

E: Effort

In order to prioritize better solution for the current problem faced by instagram users, there are four better solutions that are being proposed here. They are:

- Confirmation prompt for repost
- Undo repost option
- Granular location sharing controls
- Clear location privacy settings

Applying RICE approach to the above features using estimated score will help prioritize optimum solution.

Formula for RICE Score = (Reach*Impact*Confidence)/effort

PRODUCT LENS: WHAT MATTERS MOST - INSTAGRAM

i)Confirmation prompt for repost:

This option enables users to confirm before posting and avoids immediate or spontaneous feed share.

Assuming that out of 500 million daily active users around the world,

Reach is 200M (million), Impact is 2 (medium – on a scale of 1 to 3), Confidence is 80%, Effort is 2 months that it could take time for development and implementation.

RICE Score = (200M*2*0.8)/2 = 160M

ii) Undo repost option:

This option facilitates users to undo the repost immediately.

Reach is 200M, Impact is 1, Confidence is 60%, Effort is 1 month

RICE Score – (200M*1*0.6)/1 = 120M

iii) Granular Location sharing controls:

This is the personalized settings that allow categorize based on the choice like sharing the location with close friends, selected people etc.,

Reach is 300M, Impact is 3, Confidence is 70%, Effort is 6 months.

RICE Score = (300M*3*0.7)/6 = 105M

iv) Clear location privacy setting:

An option that allows user to make avail of disable option for location sharing the brings a feel of safe and security.

Reach is 400M, Impact is 2, Confidence is 90%, Effort is 3 months.

RICE Score – (400M*2*0.9)/3 = 240M

PRODUCT LENS: WHAT MATTERS MOST - INSTAGRAM

By the above estimated analysis, it gives clear location privacy setting is most optimum among the proposed solutions by testing it with RICE framework.

4) MoSCoW Framework:

It is a framework that classifies the proposed features in to Must have, Should have, Could have and Won't have solutions that help to better optimize real solution to deliver value to the user. It deals with stakeholder alignment that makes decision in line with internal teams.

i)Must have: These features are essential and non-negotiable.

ii) Should have: These features are critical but not necessary.

iii) Could have: These features are better to have but will not impact in its absence.

iv) Won't have: These features are not at all required but can be implemented for future development if needed.

Basis on the above discussed framework, we prioritize the proposed features in to:

- Must have - Clear Location privacy setting
- Should have - Confirmation prompt for repost, Undo repost option
- Could have - Granular Location sharing control
- Won't have - none

Although we can categorize Customized unrepost option as won't have feature, assuming it to be important to have as one among the proposed features, consider it should better to have feature that enable the users to undo quickly when unrepost pop up is visible.

PRODUCT LENS: WHAT MATTERS MOST - INSTAGRAM

5) Kano Framework:

This prioritization model will help to build and design feature on its user centric solution. It can be understood as Basic Needs, Performance Needs, Delighters, Indifferent, Reverse.

i)Basic Needs: The presence of these needs will not delight but create user dissatisfaction.

ii)Performance Needs: Customer satisfaction depends how well they are being executed to deliver value.

iii)Excitement Needs(Delighters): These needs delight customer but will not have impact.

iv)Indifferent: These features doesn't make any sense in their presence or absence.

v)Reverse: These features, if present, may cause dissatisfaction to some users.

Segregating proposed ideas as per the framework:

- Basic Needs – Confirmation prompt for Repost and Clear location privacy setting
- Performance Needs – Granular Location sharing control
- Delighters – undo repost option

Understanding impact of these features on users helps to describe how well it augmented user satisfaction that contribute some value in different ways, which are as follows:

- Undo repost option will decrease frustration there by leading to user satisfaction and loyalty

PRODUCT LENS: WHAT MATTERS MOST - INSTAGRAM

- Confirmation prompt for repost will help to empower the user with creative and personalized option that sets a unique platform for the instagram from its competitors.
- Granular location sharing control helps users to feel comfort and engaged.
- Clear location privacy setting assist the user to feel personal and build a sort of confidence pertaining to safe and security.

6) Minimum Viable Product(MVP):

A Minimum Viable product is a fully functional product with a limited features to test the ore value that it delivers, helps to learn about what users (especially early adopters) want and iterating them through feedback loop that typically used for matured products have already existence with huge data and large number of stakeholders.

A simple confirmation prompt repost with clear privacy setting is a MVP proposed to test and understand what exactly user needs in order to deliver value.

i)Core value that MVP delivers – It helps to build trust and user satisfaction by addressing the discomfort with regard to location sharing and unexpected reposts, ultimately making a sense of secure with privacy setting.

ii)Test Model – Demo video is good way of communicating the proposed solution to a large gathering as a whole, ensure acknowledging the latest updates where response probability is huge. Also, Concierge MVP is suitable as it helps to gain user understandings and their concerns in personal whcich would trigger out for better decision making by collecting feedback.

PRODUCT LENS: WHAT MATTERS MOST - INSTAGRAM

iii) Insights to learn – By implementing the above mentioned test models it assists to learn:

- ✓ users navigation and usability.
- ✓ click behaviour and their thought process while using application.
- ✓ User Frustation and Emotion.
- ✓ User engagement.
- ✓ Validation of assumptions.
- ✓ Feature gaps and emerging needs.
- ✓ Gathering feedback etc.,

7) <u>Metric to track MVP Success:</u>

The Answer is Retention Rate.

Since it helps to track and measure user engagement that delivers real and lasting value, retention rate is key optimum metric. A user being retained implies his or her needs are met which brings a loyal perspective towards the end product.
