VAULT
A Simple & Secure Financial Repository that Guides

MODULE - 2

WEEKLY PROJECT – 6

Product Vision & Mission

- **Vision:** “To create an Intuitive, safe environment and be the financial mentor for the first time earners.”
- **Mission:** “To assist the users track, save and stay financially confident with a simple, Hassle-free monetary system.”

Problem Statement

“When I want to manage my finances for the first time, I need a simple way to track and save money but I struggle because of complex finance terms leading to low confidentiality.”

Jobs To Be Done(JTBD)

“When I desire to invest for the first time after a salary credit, I need a financial platform that guides me to save in a simple way so that I can stay engaged and achieve my goals.”

User Research plan

Based on the secondary research data insights the following problems could be determined as follows:

- Financial literacy gap.
- Simplicity Vs complexity.
- Safe & security concerns.
- Lack of guidance.
- Retention challenges.

Persona Creation: Young Professional

Name: Krishna

Bio: First-time earner, works as a software tester in Hyderabad. Lives with flatmates, pays rent and EMIs, enjoys eating out and online shopping.

Goals & Motivations:

Build a consistent saving plan to avoid uncertainity.

Learn good money habits.

Need a safe investing support for potential gains.

Pains & Frustations:

Complex financial apps filled with jargons.

No clear guidance on actions.

Regret after spending on shopping, food etc.

Quote:

“I know I should save, but I don’t know where to start and how to stay consistent.”

Persona for Gig worker:

Name: Neha
Bio: Freelance graphic designer from Pune with irregular income cycles. Supports parents, manages rent and invests in online courses to upskill.

Goal & Motivations:

- Build flexible emergency savings to upgrade the skills.
- Simple monthly cash flow.
- Save for future unmet conditions.

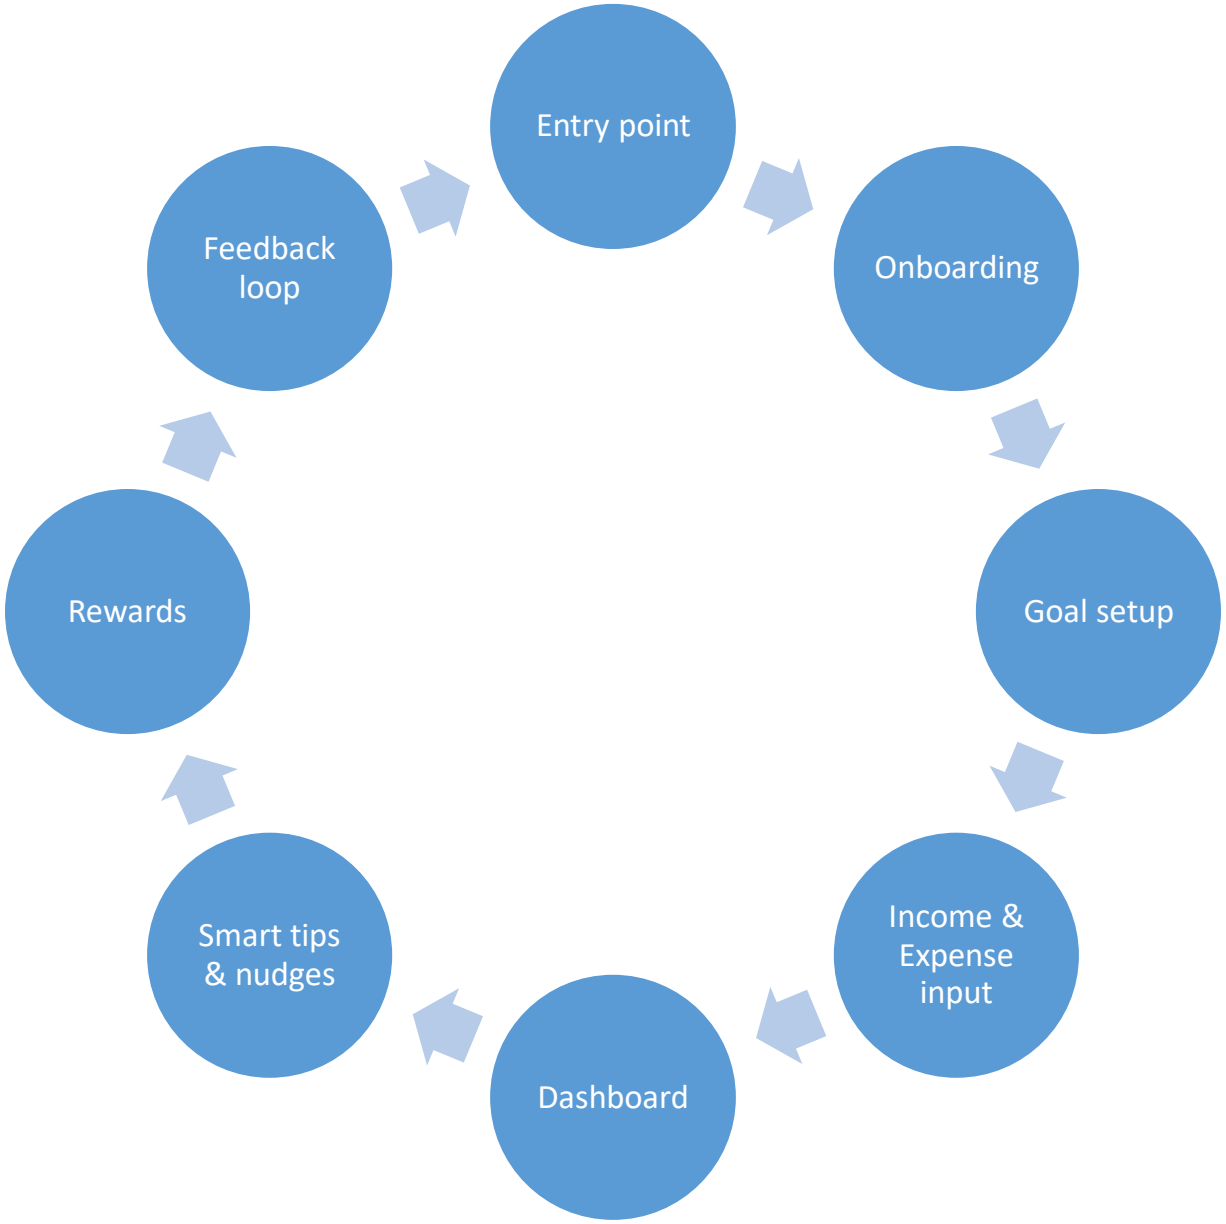
Pains & Frustations:

- Irregular income makes budgeting hard.
- Avoid finance apps due to complexity.
- Stressed by unpredictable expenses.

Quote:

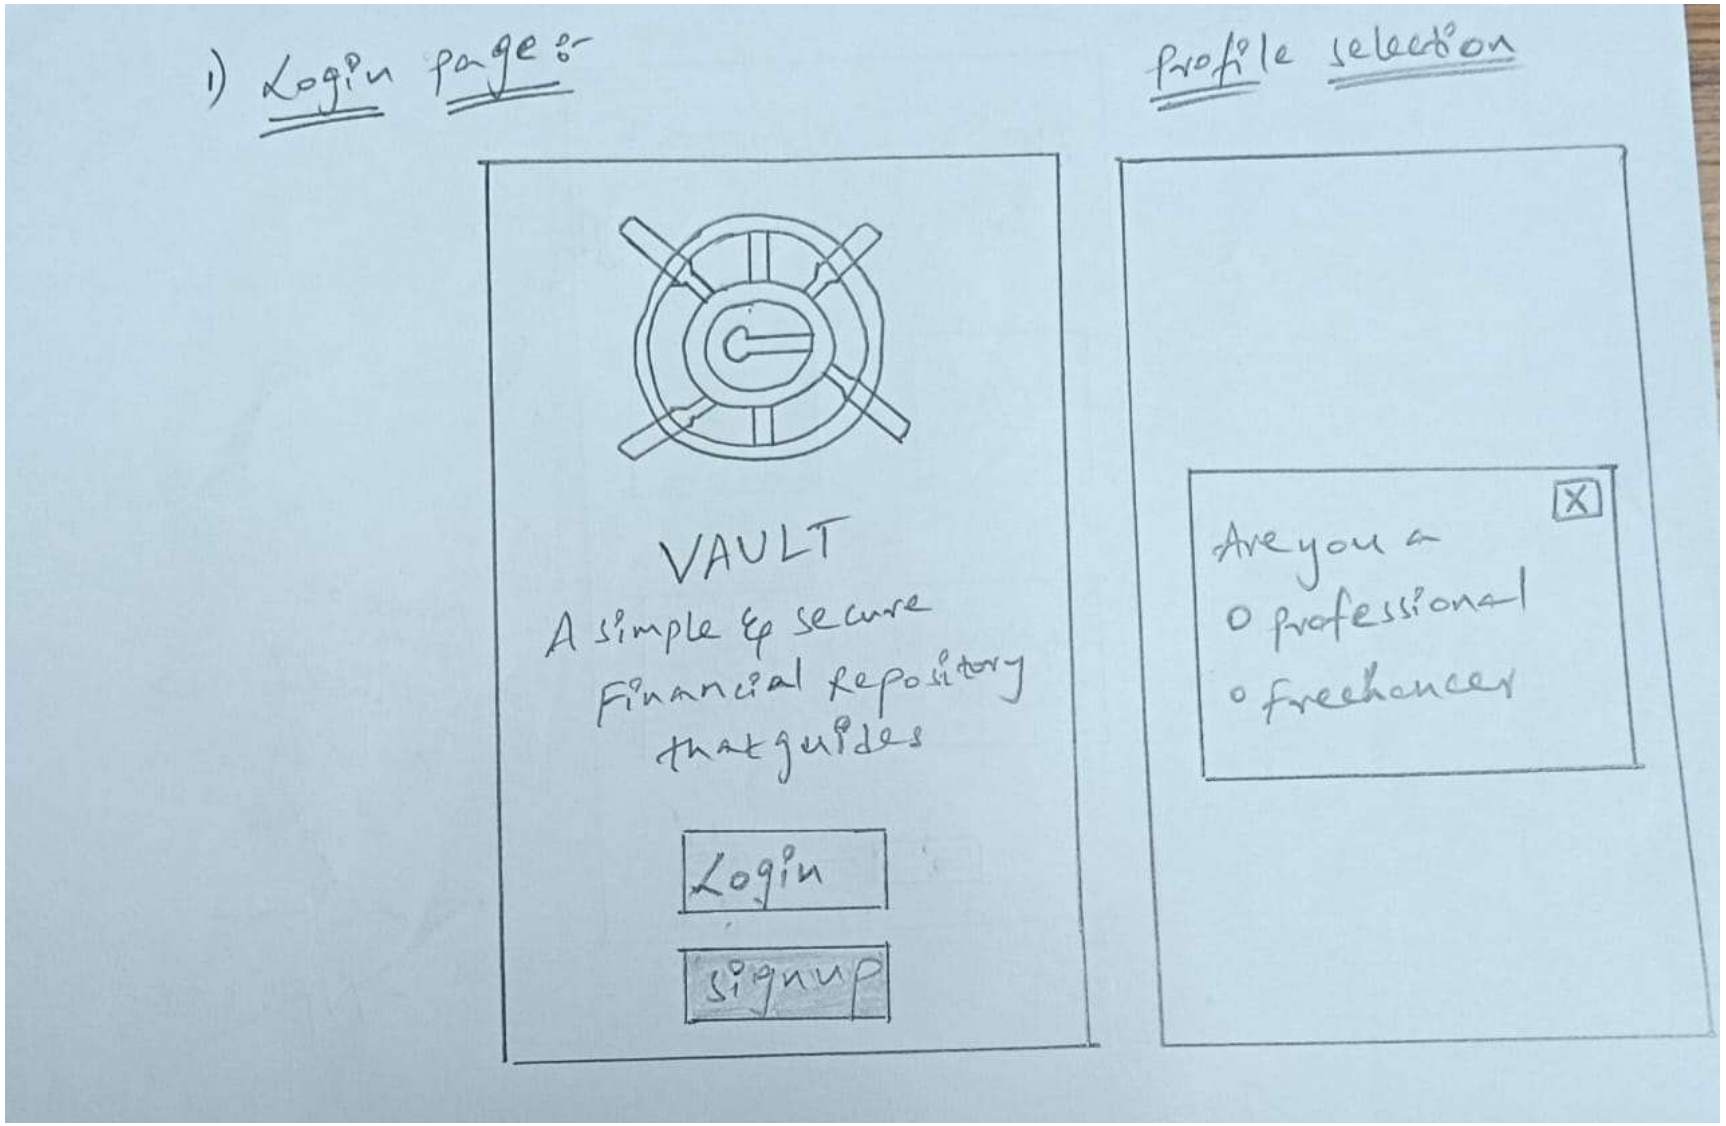
“My income isn’t steady, so I need a simple tool that deserves me.”

User Flow

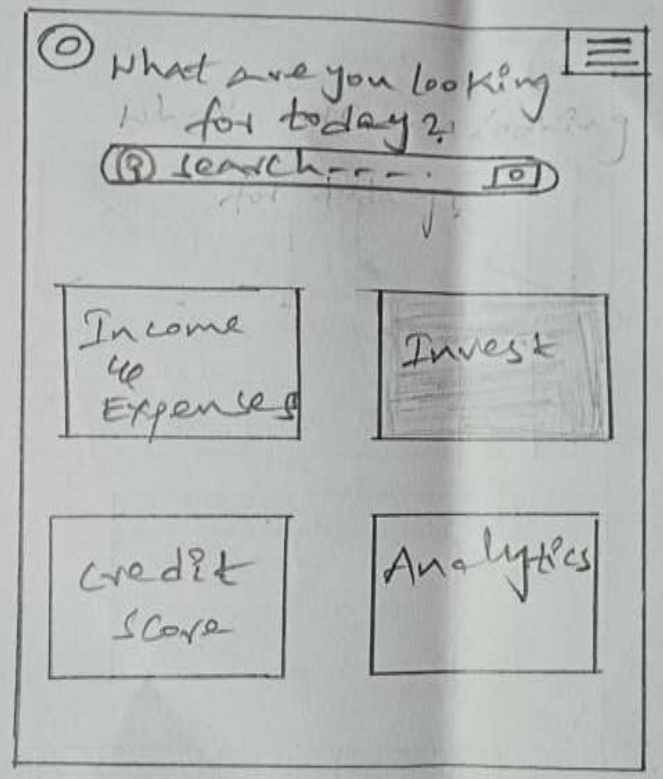


Entry point
Onboarding
Goal setup
Income & Expense input
Dashboard
Smart tips & nudges
Rewards
Feedback loop

Wire Frame(Low Fidelity)



2) Home page / Dashboard :-



Note :-

Hamburger Menu (☰) Bar include

- profile of user
- settings
- About
- contact us

3) 'Invest' section

Note :-
other funds include :
- PPF
- Bonds
- NPS etc

4) 'Income & Expenses' section:-

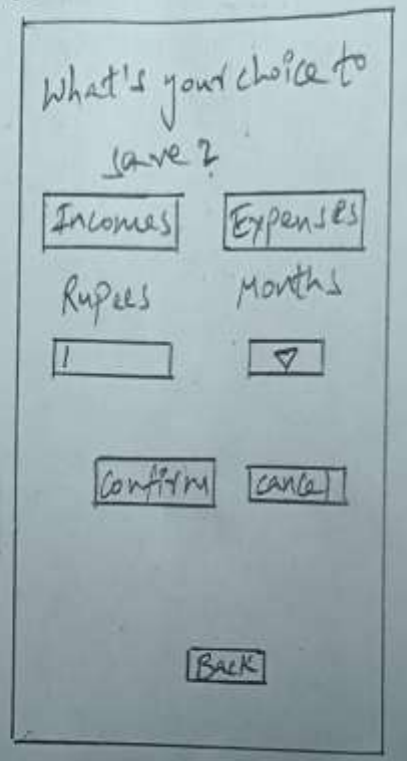
(i)

Note:-

In 'Bills & Due', it includes
- utility bills
- credit card dues
- Loans etc.

→ Adding Incomes & Expenses will show progress towards a desired goal

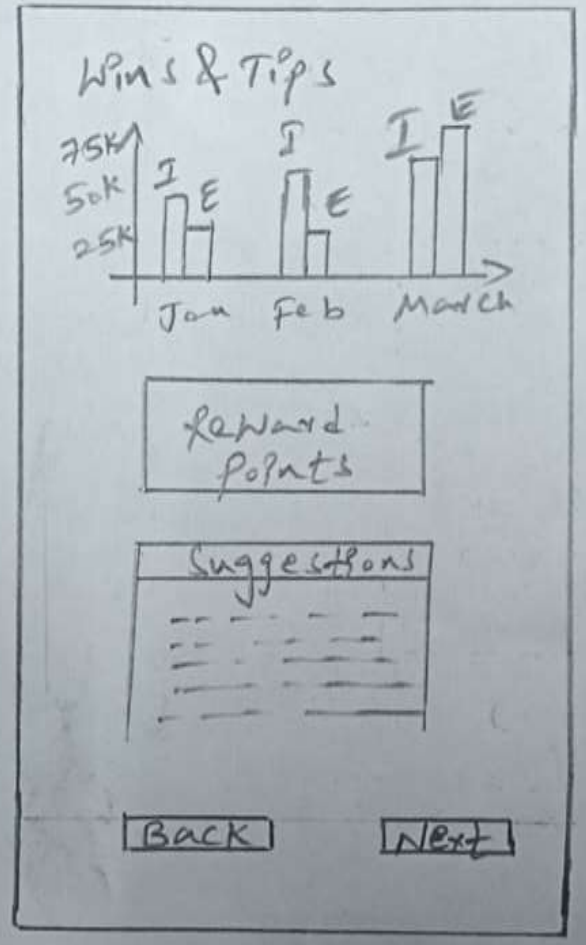
4) (ii) 'Set your Goal' section:-



Note:-

→ setting a goal is intended to save how much amount around certain time period as per the choice.

5) 'Analytics' section:-



User Story & Acceptance Criteria

User Story:

1. “As a young professional, I want an optimum recommendation system so that I stay inspired to track and save.”

2. “As a freelancer, I want a simple and flexible monetary management so that I feel secure to invest and get potential gains.”

Acceptance Criteria:

1. “Given the user has installed the vault app, when they enter home page the system has to set clear goal then user will make savings with in a few simple steps.”

2. “Given the user has completed onboarding, when they see the interface of vault app then it must be simple and intuitive for the user to access, explore and invest safely.”

Effort Estimation(Story Points)

The estimates for the money saving and Budgeting apps should be better illustrated as below.

Based on Fibonacci like scale(0,1,2,3,5,8,13,21) we can give the score as:

- Core expense tracking - 21
- Saving & Budgeting features - 13
- Trust & Security - 5
- Usability & Onboarding - 8
- Rewards & Suggestions – 3

- ✓ The above score implies higher the score higher the complexity to design and implement.
- ✓ The assumptions are made by taking the core important characteristics in to consideration like Effort, complexity and Unknown risks or uncertainity.

Minimum Viable Product(MVP)

Implementing the following steps will make an effective MVP Design:

- Simple goal setup.
- Basic income & expense tracking.
- Tips & reminders.
- progress bar(Analytics).
- Reward system.

Road Map

The basic Goal based road map for the MVP manisfested could be explained as:

Goal 1: Validate core user needs.

Goal 2: Enable simple tracking.

Goal 3: Build motivation and trust.

Goal 4: Collect feedback and iterate.

Goal 5: Prepare for next iteration if needed.

Usability testing

The users might be asked to respond for the following process to perform:

- Onboarding and profile setup.
- Goal set up and adding incomes & expenses that help visualize progress towards desired goal.
- Simple vs complex in accessing the app for savings or budgeting.
- Response to nudges and milestones.
- Ask to give feedback on their experience and rotate the loop.

Measure the Success

❖**Task Success rate:**

- Assuming 4 out of 5, user should be able to access and save the amount with out any issue.
- The expected task success ratio is 90%.

❖**Time taken:**

Assuming Average time taken to start investing after opening app might be 10 seconds.

❖**User Satisfaction:**

on a scale of 1-5, Assuming Average user rating for setting a goal would be 4 out of 5.

AI Thinking

‘Automate feedback’ is the one best option I strongly feel to integrate AI for the concerned MVP design as:

- It mainly focuses on encouragement and clarity for the first time earners.
- It requires low effort as it runs automatically, no manual work needed.
- It stimulates interest among users by building confidence through nudges, rewards and suggestions thereby leading to high positive emotions.
- Build trust and helps in user retention.
- It can be further improved to analyze spending patterns and customize suggestions based on user engagement.
