INSTA REEL

“AI GROWTH PARTNERS FOR ENTREPRENEURS”

MODULE – 2
WEEKLY PROJECT – 8 (PRD WRITING)

Executive Summary

Small and medium businesses(SMB’s) in India increasingly rely on Instagram to attract customers, but most fail to leverage Reels effectively due to lack of time, skills, and trend awareness. Reel Rocket is an AI-powered solution that helps SMB owners generate trend-driven, professional reels within minutes.

The product offers:

- AI script generation in multiple languages.
- Trending audio & template suggestions.
- Auto-edit reel creation from product photos and captions.
- Scheduling and analytics for consistency.

Problem Statements

SMBs want visibility on Instagram but:

- Struggle with content creation skills (editing, scripting).
- Lack awareness of latest trends and audios.
- Rely on freelancers, leading to inconsistency and higher costs.
- Post irregularly, resulting in missed organic reach.

Impact: Lost opportunity for customer acquisition, weaker digital presence, higher costs.

User Personas

Name: Rita Sharma

Bio: 32-year-old boutique owner in Jaipur. Runs a small fashion boutique and uses Instagram to showcase her collections. Manages marketing herself due to limited budget.

Gains & Motivations:

- Wants consistent visibility on Instagram
- Desires to connect with younger audiences
- Hopes to increase walk-ins and online orders.

Pains & Frustrations:

- Dependent on freelancers who delay work and create inconsistent branding.
- Struggles with video editing and keeping up with trending reels.

Quote: “I know reels can help me sell more outfits, but I just don’t have the time or skills to make them every day.”

Name: Arjun Mehta

Bio: 35-year-old bakery owner in Bangalore. Popular for his cakes and snacks but struggles with online promotion. Tech-savvy but busy running daily operations.

Gains & Motivations:

- Wants to showcase daily specials, drive more foot traffic, and grow online orders.
- Excited by tools that save him time and effort.

Pains & Frustrations:

- Finds video editing too time-consuming.
- Doesn’t know which music or formats are trending.
- Feels overwhelmed by managing both baking and marketing.

Quote: “If I could create reels in minutes without learning editing, I’d post every day.”

Goals & Success Metrics

Primary Objective: Enable small business owners in India to consistently create trend-driven Instagram Reels that increase their visibility, engagement, and customer acquisition — without needing advanced skills, high costs, or external help.

Success Metrics:-

Level 0:

1. Reel Posting Frequency:

How many reels a business posts in a month.

Today: 2 per month

Goal: 8 per month (so businesses post more regularly).

2. Reach per Reel:

How many people watch one reel on average.

Today: 1,000 views

Goal: 3,000+ views (so each reel gets more visibility).

Level 1:

1.Engagement Rate

How much people interact with the reel (likes, shares, comments).

- Today: 2%
- Goal: 6% (so reels are not just seen but also loved).

2. Cost Savings vs Freelancers

Money saved when business owners don’t need to hire freelancers for reels.

- Today: 0 saved
- Goal: Save ₹5k–₹10k per month.

Level 2:

1. User Satisfaction (NPS)

How happy users are with the app (measured by survey score).

- Goal: Above 60 (means most users would recommend it).

2. Reel Creation Time

How long it takes to make a reel.

- Today: 2–3 hours
- Goal: Under 5 minutes.

Guardrails:

Quality: Reels should still look good — at least 80% users must say they're satisfied.

Churn: Users quitting should be less than 10% per month.

Feature Requirements

The features that are optimum for the problem stated could be outlined as follows:

- AI script generator.
- Trend aligned audio & template generation.
- Auto edit reel maker.
- Scheduler & Insights.

Prioritization Framework

Based on Moscow Prioritization Model the features are classified as:

Must have:

1. AI Script Generator.
2. Trend aligned Audio & Template Generation.
3. Auto edit reel maker.

Should have: Scheduler & Insights.

Could have: Collaborative Tools.(platform to discuss & decide about features that align with the concerned problem)

Won’t have: Paid Ad tools.(the one which to avoid)

User Journey Map

Discover → Sees app via WhatsApp community/Meta ads.

Onboard → Simple sign-up, category selection.

Create Script → AI generates script in English/Telugu/Hindi.

Add Media → Upload product photos.

Auto-Reel → App generates reel draft with music.

Schedule/Post → Posts directly on Instagram.

Insights → Sees reach, engagement, next best time.

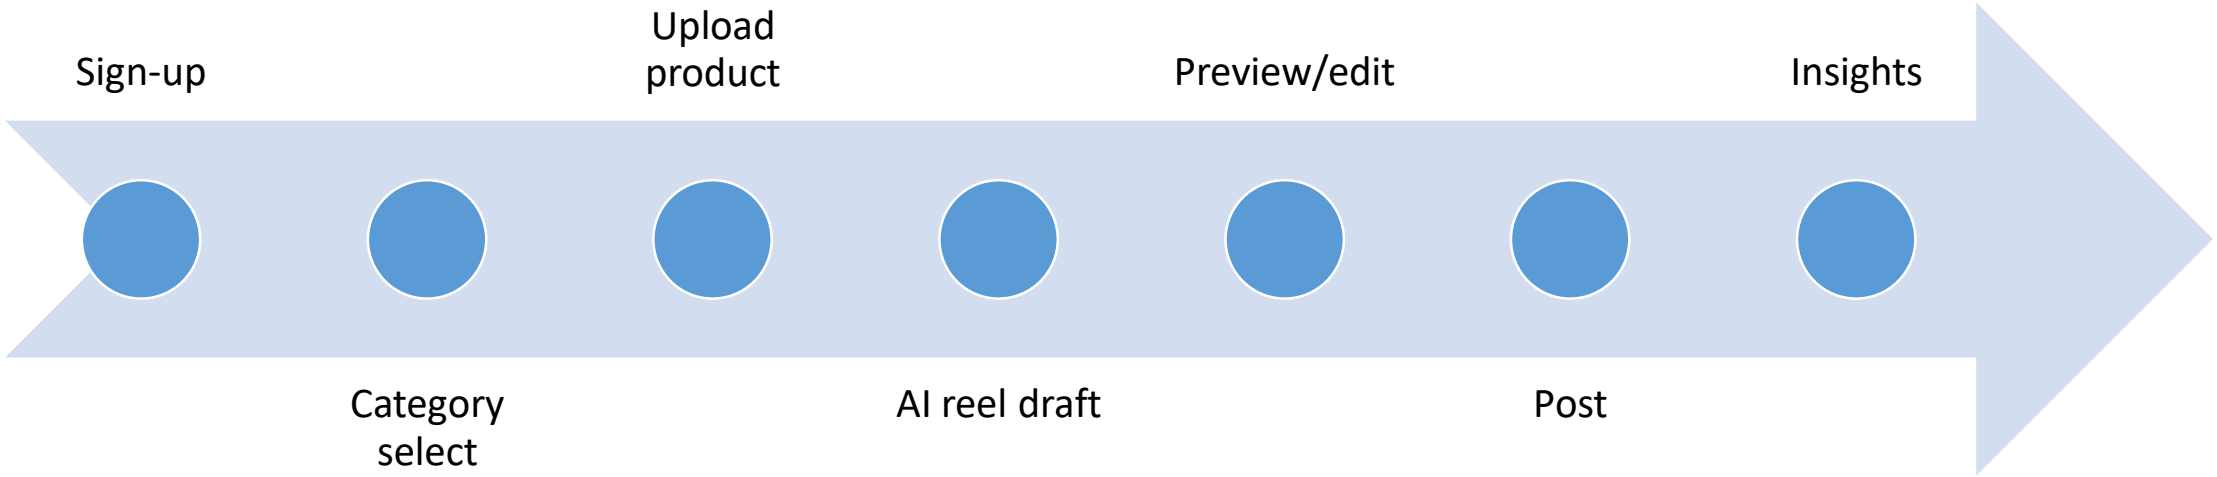
User Flow Diagram



Technical Requirements

Frontend: Mobile-first app (React Native).

Backend: Node.js & Python AI services.

AI Models: GPT for script generation, Text to speech(TTS) for voiceover, computer vision(CV) for template fitting.

Third-Party APIs: Instagram Graph API, Trending music API.

Performance: Reel generation <30 sec.

Security: Open Authorisation(Oauth) to access Instagram without sharing password, secure file storage.

Analytics & Measurement

Events:(what actions are tracked in the app)

Events are like "checkpoints" — they record when important actions happen. Script generated → When AI creates a script for the user.

- Reel created → When the reel is successfully assembled (with photos, audio, voiceover).
- Reel posted → When the reel is published on Instagram.
- Engagement tracked → When likes, comments, shares, and views are measured after posting.

This helps you know where users drop off (e.g., creating reels but not posting them).

Dashboard (what users and you can see)

The dashboard shows metrics that matter for small business owners

- Creation frequency → How often the user makes reels.
- Posting consistency → How regularly they are posting (daily, weekly, monthly).
- Reach/engagement → How many people saw, liked, or interacted with their reels.

This helps users measure progress and see if their reels are boosting visibility.

A/B Tests (experiments to improve results)

A/B testing = showing two different options to users and comparing performance.

- Posting times → Morning vs evening posting. Which gets more reach?
- Script tone → Friendly vs formal captions. Which drives more engagement?
- Audio type → Trending song vs neutral background track. Which performs better?

This helps the product continuously learn and suggest the best strategies for business growth.

PR-FAQ

- **What is it?:** Reel Rocket, an AI reel coach for SMBs.
- **Who is it for?:** Indian small business owners.
- **Why now?:** Reels dominate discovery; SMBs lack resources.
- **How does it work?:** AI generates scripts, reels, posts them with insights.
- **What's next?**: Partnerships with e-commerce and payments apps to integrate marketing & sales, advanced analytics for ROI tracking and WhatsApp-based reel creation for ultra-easy adoption.
- **Differentiator?:** Local language & SMB-tailored templates.
- **Success looks like?:** SMBs double visibility & engagement at near-zero extra cost.
- **How is it different from Canva & InShot?:**

- **Canva**: Great for design but manual; Reel Rocket is automated & AI-driven.
- **InShot**: Editing-focused; Reel Rocket handles end-to-end creation, posting & insights.
- **Reel Rocket:** coach, creator & publisher, not just a tool.
