SUKOON

“A STRESS FREE, HIGH - TRUST USER FOCUSED MENTAL HEALTH AID FOR DEVELOPING CITIES”

WEEKLY PROJECT – 9

MODULE - 3

Problem Statement

“When I want to access the mental health app to deal with my Stress & Anxiety, I need a simple & affordable user interface with multilingual option that provides optimum experience but I Struggle because of lack of counsellors leading to low trust & support.”

The key Features to be suggested for the app design to tackle the situation might be:

- Cost Effective support & customized guided audios.
- Balanced Price strategy for counsellor & theraphist sessions.
- Mood tracker and basic journaling for Emotional Awareness.
- Regional Personalization & AI Chatbots.
- Anonymous mode & Privacy controls.
- Low data & offline Mode.

User Segmentation & Willingness to pay

Segment	Description	Key Pain Points	Willingness to Pay
Students (18–25)	Facing exam stress and self-doubt.	No safe outlet to talk, limited awareness.	Rs 49–Rs 99/month
Homemakers (25–40)	Managing emotional load at home.	Stigma, lack of self-care time, language gap.	Rs 99–Rs 149/month
Working Professionals (25–45)	Teachers, small-business owners.	Burnout, job stress.	Rs 149–Rs 299/month
Elderly (50+)	Loneliness and isolation.	Limited tech skills, social withdrawal.	Rs 49–Rs 99/month

Pricing Model Design

Tier	Price	Key Features	Objective
Free	Rs 0	Mood tracker, 3 guided audios/week, limited basic journaling, regional language support.	Build trust & daily habit.
Plus	Rs 99/month	Unlimited journaling, daily meditations, mood insights dashboard.	Affordable upgrade for active users.
Premium	Rs 249/month	Live chat with counsellors, personalized plans, full insights.	Monetize higher-value services.
Add-on:	Rs 499 per session	Pay-per-chat with certified therapist.	Enables access without full plan.

Growth Flywheel Using AARRR

Stage	Focus	Tier-2 Adaptation
A — Acquisition	Reach users	Partner with colleges, NGOs, and local clinics; vernacular campaigns.
A — Activation	First experience	First mood check triggers local audio relaxation.
R — Retention	Build habit	Daily streaks, WhatsApp reminders, weekly progress updates.
R — Referral	Encourage sharing	Invite friends for 7-day Plus plan free.
R — Revenue	Monetize	Low-cost upgrades after 2–3 weeks of consistent use.

Behavioural Pricing Tactics

Tactic	How It Works	Application in MindEase	Purpose
1. Decoy Effect	Introduce a mid-tier plan that makes the premium plan look more valuable.	Keep Plus Plan at Rs 99 and Premium Plan at Rs 249 — users compare and see Premium as better value.	Nudge users toward higher plan.
2. Charm Pricing	Prices ending in “9” appear cheaper than round numbers.	Use Rs 99, Rs 249, Rs 499 instead of Rs 100, Rs 250, Rs 500.	Makes plans feel more affordable.
3. Anchor Pricing	Show a higher “original price” next to the offer price.	Display – Rs 499 crossed out & Now Rs 249/month.	Highlights savings and creates perceived value.
4. Free Trial	Let users try paid features for a limited time.	7-day free trial of Plus Plan or one discounted counsellor session.	Builds trust and lowers entry barrier.

Risks & Scalability Plan

Risk	Challenge	Mitigation
Stigma	Fear of being judged.	Anonymous use & local campaigns (CSR initiatives & campaigns).
Affordability	Limited willingness to pay.	Strong free tier & ₹99 entry plan.
Therapist Shortage	Few regional counsellors.	AI chatbot for 80% cases, human support for 20%.
Trust & Data Privacy	Hesitation to share emotions online.	End-to-end encryption, clear consent.
Scalability	Multi-language management.	Start with 3 major languages - expand gradually.

Bonus Prompt

Localized Campaign:

- **Campaign Name:** *“Sukon Sundays” — A Pause for the Heart*
- **Concept:** Every Sunday, the app unlocks one free mindfulness or music therapy session in the local language.
- **Target:** Students & homemakers.
- **CTA:** “Take 10 minutes to breathe and reset.”
- **Expected Impact:** scope might be estimated as 20% weekly active users, 10% paid conversions post-campaign.
